## Appendix C: Robustness checks

**Figure A. Regression coefficients of CRT scores for different dependent variables (shown on the y-axis) along with confidence intervals after controlling for age, gender, education, and income. All variables have been standardized, mean-centered and scaled by standard deviation for comparability. Thin lines indicate 95% confidence intervals (CIs), thick lines indicate 90% CIs. Right of the dotted zero line (i.e., positive values) indicates a positive correlation.**
